                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            QY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               convention, and nucleic acids encoding them. The invention additionally relates to host cells comprising a nucleic acid of the invention; methods for the protein of a protein of the invention; antibody specific for a protein of the invention; methods for detecting a protein or nucleic acid of the invention; and methods of identifying agents which bind to or modulate the activity of a protein of the invention. The novel secreted proteins, nucleic acids encoding them, and antibodies against them may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate expression or activity of the secreted proteins. The secreted proteins of the invention may also be used to identify modulators of expression or activity, which may be useful in the treatment of disorders associated with the proteins of the invention e.g., cancers and immunological disorders. The present convention errors are fragment of a human TANGO protein of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a Nogo receptor homologue polypeptide, NgR2 or CC NgR3, comprising a 50 amino acid LRRCT sequence, a 284 amino acid NTLRRCT CC sequence, or a 420, 461 or 392 amino acid sequence, all given in the Sequence, or a 420, 461 or 392 amino acid sequence, all given in the CC specification. The NgR3 protein or its binding antibody is useful for CC decreasing inhibition of axonal growth of a central nervous system (CNS) concuron, by contacting the neuron NgR3 or its antibody, and for treating CC NS disease, disorder or injury. NgR3 or a vector comprising NgR3 is cuseful for treating cerebral injury, spinal cord injury, stroke, CC demyelination, encephalomelitis, multiple sclerosis, monophasic CC demyelination, encephalomelitis, multiple sclerosis, monophasic CC Relation, encephalomelitis, as a bait protein of inducting an immune response in a CC mammal against NgR3 is useful for inducting an immune response in a CC mammal against NgR3 is as abit protein in a two-hybrid or three-hybrid assay, and as a research tool for identification, characterisation and CC sequences of the invention, characterisation and sequences of the invention, characterisation and cCC vector containing NgR3 is useful for producting non-human transgenic CC NgR3, for localisation and/or quantitation of NgR3, and for diagnostic CC antibodies are useful for treating or preventing unregulated cellular CC consensus NgR LRRCT domain of the invention. This sequence represents the cconsensus NgR LRRCT domain of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              disorders e.g. amnesia or age-related memory loss, and neurological disorders e.g. migraine. AZAD molecules are useful as markers of disorders or disease states, as markers for precursors of disease state or precursors of disease state or as markers of drug activity or pharmacogenomic profile of a subject. The AZAD polypeptide and polynucleotide are capable of modulating protein-protein interaction, e.g. by interacting with an extracellular component, thereby modulating e.g. by interacting with an extracellular component.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Khodadoust MM
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               neoplastic transformation and tumour progression. AZAD proteins are useful as immunogens to raise anti-AZAD antibodies which are useful to detect and isolate AZAD proteins and modulate its activity. AZAD proteins are useful to screen for naturally occurring AZAD substrates and to screen for drugs or compounds which modulate AZAD activity. AZAD nucleic acid fragments are useful as primers or hybridisation probes for the detection of AZAD-encoding nucleic acids. CDAA encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        cellular activities, including attachment, adhesion, migration, patterning, growth and/or differentiation of a cell. AZAD proteins regulate embryonic development and differentiation, tissue maintena and function, pathological conditions, e.g. neuronal degeneration,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  carcinomas and testicular tumour). The neurodegenerative disorders include Alzheimer's disease, dementias related to Alzheimer's disease, Parkinson's disease, multiple scierosis, amyotrophic lateral scierosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   disorder (e.g. neurodegenerative disorders, including CNS disorders) and a prostate disorder, e.g. prostatitis, benign prostatic hyperplasia and cancer (e.g. adenocarcinoma, prostate cancer, genitourinary system
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New leucine-rich repeat-containing protein and nucleic acid molecules for diagnosing, treating neural disorders, such as neurodegenerative disorders, such as Alzheimer's disease, dementia, epilepsy and prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  the AZAD protein are useful in gene therapy. AZAD sequences are also useful to map their respective genes on a chromosome, for tissue type and in forensic identification of a biological sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          epilepsy, psychiatric disorders e.g. depression, schizophrenic disorders, mania, anxiety or phobic disorders, learning or memory

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       RESULT 6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to human JAFFA polynucleotides (see AAR90326) and polypeptides (see AAR82351). JAFFA is a novel member of the fibroblast growth factor family. JAFFA proteins may be useful for developing novel diagnostic and therapeutic agents for JAFFA-associated disorders such as cancers and ABO(H) blood group disorders, and for controlling cellular proliferative and/or disorders. JAFFA nucleic acids and proteins may be used to treat and/or diagnose a variety of immune disorders such as cancering a such as a cancering a such as a cancering a continuate disease and multiple sclerosis. JAFFA nucleic acids may controlled a cancering a

Specific examples include meloblastoma, juvenile AIDS, diabetes mellitus, rheumatoid arthritis, systemic lupus erythematosis, multiple sclerosis, Chron's disease, ulcerative collities, asthma, anemia, and chronic active hapatitis. Sequences AAG65806-814 represent consensus amino acid sequences derived from a hidden Markov model corresponding to the LRR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  polypeptide can be expressed
33395 polynucleotides ~~
                                                        New leucine-rich repeat-containing protein and nucleic acid molecules for diagnosing, treating neural disorders, such as neurodegenerative disorders, such as Alzhelmer's disease, dementia, epilepsy and prosta
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New polypeptide for preventing or treating disorders associated with cellular adhesion, proliferation or differentiation, comprises polypeptide 33395, a member of the leucine rich repeat protein family
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        07-AUG-2001

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  disorders e.g. migraine. AZAD molecules are useful as markers of disorders or disease states, as markers for precursors of disease state, for predisposition of disease state or as markers of drug activity or pharmacogenomic profile of a subject. The AZAD polypeptide and polynucleotide are capable of modulating protein-protein interaction, e.g. by interacting with an extracellular component, thereby modulating ceilular activities, including attachment, adhesion, migration, patterning, growth and/or differentiation of a ceil. AZAD proteins regulate embryonic development and differentiation, tissue maintenance and function, pathological conditions, e.g. neuronal degeneration, neoplastic transformation and tumour progression. AZAD proteins are useful as immunogens to raise anti-AZAD antibodies which are useful to detect and isolate AZAD proteins and modulate its activity. AZAD

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAE23805 standard; Protein; 54 AA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   the AZAD protein are useful in gene therapy. AZAD sequences are also useful to map their respective genes on a chromosome, for tissue typing and in forensic identification of a biological sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      proteins are useful to screen for naturally occurring AZAD substrates and to screen for drugs or compounds which modulate AZAD activity. AZAD nuclaic acid fragments are useful as primers or hybridisation probes for the detection of AZAD-encoding nucleic acids. cDNA encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Parkinson's disease, multiple sclerosis, amyotrophic lateral sclerosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       human AZAD protein

They are useful for determining the CC presence of or predisposition to lung cancer. NOVI compounds are useful CC for development, differentiation and activation of thymic immune cells, CC pathologies related to spermatogenesis and male infertility, diagnosis CC of several human neoplasias and diseases or pathologies of cells in CC blood circulation such as red blood cells and platelets. NOVI nucleic cacids are useful for detecting specific cell types and as specific cC marker for cancers in tissues. NOV2 and NOV4 compounds are useful to CC direct the development of nervous system and angiogenesis and for CC compounds are useful for treating various orthopaedic disorders and/or CC injuries, inflammatory diseases of connective tissue e.g. rheumatoid CC arthritis, congenital muscular dystrophies, various muscular disorders, injuries, inflammatory diseases of connective tissue e.g. rheumatoid CC arthritis, congenital muscular dystrophies, various muscular disorders, CC useful for treating atopy, dysprothrombinaemia, hypoprothrombinaemia, CC useful for treating atopy, dysprothrombinaemia, hypoprothrombinaemia, cervical carcinoma, hypoprothrombinaemia, cuttopic syndrome, hypokalaemic period paralysis, acute promyelocytic leukaemia, NUMA/Raka type, macular dystrophy, viteliiform type, McArdle disease, tone of the control of control

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    disorders, and for controlling cellular proliferative and/or differentiative disorders. JAFFA nucleic acids and proteins may be used to treat and/or diagnose a variety of immune disorders such as autoimmune disease and multiple sclerosis. JAFFA nucleic acids may also be used to express JAFFA protein, to detect JAFFA mRNA or a genetic alteration in a JAFFA gene, and to modulate JAFFA activity. Note: The present sequence is given in the Sequence Listing from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAF90326) and polypeptides (see AAB82351). JAFFA is a novel member of the fibroblast growth factor family. JAFFA proteins may be useful for developing novel diagnostic and therapeutic agents for JAFFA-associated disorders such as cancers and ABO(H) blood group
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Isolated JAFFA nucleic acid molecules which encode novel fibroblast growth factor family members (JAFFA) are useful for developing novel diagnostic and therapeutic agents for JAFFA-associated disorders suc

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention provides an isolated nucleic acid encoding a polypeptide of the leucine rich repeat (LRR) family, designated 33395. The 3395 polypeptide can be expressed by standard recombinant methodology. The 3395 polynucleotides and polypeptide can be used to prevent or treat disorders associated with 3395 expression, for example those involving aberrant cellular adhesion, proliferation or differentiation. Specific examples include meloblastoma, juvenile AIDS, diabetes mellitus, rheumatoid arthritis, systemic lupus erythematosis, multiple sclerosis, chron's disease, ulcerative colltis, asthma, anemia, and chronic active hepatitis. Sequences Ad65806-814 represent consensus amino acid sequences derived from a hidden Markov model corresponding to the LRR domains of the the human 33395 polypeptide.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (ELISA). Note: The sequence data for this patent did not form part of the printer specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         polypeptides. The proteins and their associated DNA sequences are used the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis and ence) pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunoscrbat assay (BLTSA)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 enzyme linked immunosorbent assay (ELISA).

The dragline silk is produced in the major ampullate gland and is the strongest of the 5-7 different silk proteins produced by the spider. The gene encoding the protein can be used to express recombinant silk protein for use in textiles, and composite and ballistic materials. Modifications of the relative amts. of amorphous and crystalline domains can be used to alter the properties of the material.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; prostate cancer; prostate cancer antigen; detection; diagnosis; neuroprotective; cytostatic; cardioactive; immunomodulatory; muscular; vulnerary; gastrointestinal; nephrotropic; antiinfective; gynaecological; antibacterial; gene therapy; neural; immune; reproductive; renal;

The prostate cancer antigen polynucleotides may be used for detection of prostate cancer, chromosome identification, as chromosome markers, and for numerous other diagnostic or research purposes. The prostate cancer antigens may be used to treat disorders such as neural, immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal, and proliferative disorders, wounds, and infectious diseases. AAF16506 to AAF16514 to AAB57303 represent sequences used in the exemplification of the present
